

AIM: To construct a VLAN and make the PCs communicate among a VLAN

TOPOLOGY:

PROCEDURE

- Place 4 PCs on switch, router and connect to switch and switch to router using copper straight wire
- Assigning IP address to PC's. Give VLAN no., name in switch and add.

In router 0 do :

> enable

# config terminal

# interface fa 0/0

# exit

# exit

# vlan database

# vlan 2 name

# exit

# config terminal

# interface fa 0/0.1

# encapsulation dot1q 2

# ip address 192.168.2.1 255.255.255.0

# no shut

# exit

In switch 0 do  
choose VLAN database  
Turn Port status on for the corresponding ethernet  
Enable Trunk.

#### \* OBSERVATION:

Proper trunk configuration is enabled to make VLAN work properly

VLAN trunking allows switches to forward frames from different VLANs over a single link called trunk  
ping messages from different PCs are observed to be working successfully heretoforth
